

MB4000RU Series

Compact, 1 x 2 Inch 40W, 4:1 Input Range DC/DC Converters

Electrical Specifications

Specifications typical @ +25°C, nominal input voltage & rated output current, unless otherwise noted. Specifications subject to change without notice.

Key Features:

- 40W Output Power
- 4:1 Input Voltage Range
- 1,500 VDC Isolation
- Single & Dual Outputs
- Efficiency to 91%
- Compact 1 x 2 Inch Case
- Wide Temp Operation
- Industry Standard Pin-Out
- Low Cost

For heatsink option, add suffix "H" to model number (i.e. **MB4024S-15RU-H**)

Notes:

- Start up time is measured at nominal input and with a constant resistive load.
- Load regulation is specified for a load change of minimum load to full load.
- Cross regulation is measured with the output being tested at 100% load. The second output is varied from 25% to 100% load.
- When measuring output ripple, it is recommended that an external 1 µF capacitor and 10 µF capacitor be connected in parallel from the +Vout to the -Vout pins for single output units and from each output to common for dual output units.
- Transient recovery is measured to within a 1% error band for a load step change of 25%.
- Short circuit protection is provided by a "hiccup mode" circuit.
- The switching frequency for 24 VDC output models is 285 kHz.
- Operation at no-load will not damage these units. However, they may not meet all specifications if operated below the specified minimum load.
- It is recommended that a fuse be used on the input of a power supply for protection. See the Model Selection table above for the correct rating.

Remote On/Off

Applying a signal to pin 3 will turn the unit ON/OFF. If the pin is left open, the unit operates. If grounded, the unit will shut off. The specifications for the ON/OFF function are:

Parameter	Min	Typ	Max	Units
Supply On	3.5		12.0	VDC
Supply Off	0.0		1.2	VDC
Standby Input Current		2.5		mA
Control Common	Referenced to Negative Input (pin 2)			
Control Input Current (ON)		0.5		mA
Control Input Current (OFF)		-0.5		mA

External Trim

On single output units, an external resistor may be added to adjust the converter output.

To adjust the output UP, connect a 5%, 3W resistor between the minus output pin (5) and the Vout trim pin (6). To adjust the output DOWN, connect a 5%, 3W resistor between the plus output pin (4) and the Vout trim pin (6).

The trim table at right gives suggested resistor values for this adjustment.

EMC Specifications

All units should meet EN 55022 (CE/RE) class A/B with the simple external circuit shown; using the component values given in the table.

To meet the requirements of EN 61000-4-4 and EN 61000-4-5, the value of C1 should be changed to 330 μ F/200V. Contact the factory for more information.
