

MPL-03SEUP Series

Open, Single Output, Ultra-Miniature SIP, 3W AC/DC Power Supplies

Key Features:

- 3W Output Power
- Open, Ultra-Miniature SIP
- Universal 85-264 VAC Input
- EN 60950 Approved
- Meets IEC Safety Class II
- Single Regulated Output
- Meets EN 55022 Class A
- >300 kHour MTBF
- **Low, Low Cost!**

- Notes:**
- Operation at no load will not damage the units, however, they may not meet all specifications.
 - The External capacitors (C₁ & C₃) shown in the typical connection diagrams on page 3 are required to meet specified operation.
 - All units will meet EN 55022 (CE/RE) class A with the input circuit shown in the "Typical Connection 1" diagram on page 3. The **MPL03SEUP** will meet class B with the additional filtering shown in the "Typical Connection 2" diagram on page 3. **MPD** offers filter modules that will save on board space and make the input filter design easier. Contact the factory for more information.
 - To meet the requirements of EN 61000-4-3, (10V/m) external filtering (as shown in the "Typical Connection 2" diagram on page 3) is required. This filtering may be added discretely, or by using a filter module from **MPD**. Contact the factory for more information.
 - All units will meet EN 61000-4-4 (±2 kV) with the input circuit shown in the "Typical Connection 1" diagram on page 3. To meet the requirements of EN 61000-4-4 (±4 kV), external components (as shown in the "Typical Connection 2" diagram on page 3) are required. This filtering may be added discretely, or by using a filter module from **MPD**. Contact the factory for more information.
 - All units will meet the requirements of EN 61000-4-5 (±1 kV/±2 kV), with the input circuit shown in the "Typical Connection 2" diagram on page 3. This filtering may be added discretely, or by using a filter module from **MPD**. Contact the factory for more information.
 - All units will meet the requirements of EN 61000-4-6 (3V rms), with the input circuit shown in the "Typical Connection 2" diagram on page 3. This filtering may be added discretely, or by using a filter module from **MPD**. Contact the factory for more information.
 - It is recommended that a fuse be used on the input of a power supply for protection. For the **MPL-03SEUP** series, a 1.0A/250 VAC slow blow should be used.

Typical Connection 1

The diagram above illustrates a typical connection of the **MPL-03SEUP** series. With this connection, the unit will meet EN 55022 class A, EN 61000-4-2 ($\pm 4kV$), EN61000-4-4 ($\pm 2kV$), EN 61000-4-8 and EN 61000-4-11. Components C₁ and C₃ are required to meet specified operation limits. The recommended input components are a 5D-9 (NTC), S10K300 (MOV1) and 5 mH (L_{in}). The recommended output component values are given in the table below.

Typical Connection 2: With External EMC Components

For applications that require meeting higher EMC standards, the circuit shown above is recommended. Some notes on this diagram (starting with the input circuit) are:

1. It is recommended that an external fuse be used. The recommended fuse is 1A/250V.
2. The capacitors C_x and C_{yx} are "safety" capacitors.
3. Capacitor C₁ is a filter component. This capacitor is required to meet specified operation. It should be a high frequency, low ESR electrolytic capacitor. The recommended value is given in the table below.
4. Capacitors C₂ and C₃ are output filter components. Capacitor C₃ is required to meet specified operation. Low ESR, high frequency electrolytic capacitors should be used. The recommended values are given in the table below.
5. Recommended values for components are:

6. The output TVS will help protect system circuitry if power supply fails. A recommended value is given in the table below.
7. Capacitor C₄ is ceramic. This capacitor is used to filter high frequency noise. A recommended value is given in the table below.
8. All of the components within the dotted lines of the input EMC circuit are included in a filter module available from **MPD**. Please contact the factory for more information.

Typical Board Layout: With External EMC Components

The diagram above shows a typical board layout for the **MPL-03SEUP** with the recommended EMI components shown in the "Typical Connection 2" diagram. Filter modules are available from **MPD**. Contact the factory for more information. To meet safety regulations, the board trace widths should be ≥ 3 mm, the distance between traces should be ≥ 6 mm, and the distance between traces and ground should be ≥ 6 mm. The distance "A" noted on the drawing should be ≥ 6.4 mm.

Primary/Secondary Separation

To meet safety requirements, it is required that the separation between any external components in the primary circuit and components in the secondary circuit be ≥ 6.4 mm. The diagram above shows the approximate positioning of the primary/secondary circuits. For more information, please contact the factory.

MicroPower Direct offers a wide range of AC/DC power supplies in miniature SIP packages. Current models include:

MPL-03SE

Key Features:

- 3W Output Power
- Universal 85-264 VAC Input
- EN 60950 Approved
- Meets IEC Safety Class II
- Right Angle Pins Available
- Meets EN 55022 Class A
- >300 kHour MTBF
- **Ultra-Miniature "SIP" Case**

MPL-03SEUP

Key Features:

- 3W Output Power
- Universal 85-264 VAC Input
- EN 60950 Pending
- Meets IEC Safety Class II
- Standby Power Consumption <0.5W
- >200 kHour MTBF
- Also Available at 1W and 5W
- **Open, Ultra-Miniature "SIP" Package**

MPL-05SE

Key Features:

- 5W Output Power
- Universal 85-264 VAC Input
- EN 60950 Approved
- Meets IEC Safety Class II
- Right Angle Pins Available
- Meets EN 55022 Class A
- >300 kHour MTBF
- **Ultra-Miniature "SIP" Case**
