

MPL-05SE Series

Single Output, 5W Ultra-Miniature SIP AC/DC Power Supplies

Key Features:

- 5W Output Power
- Universal 85-264 VAC Input
- EN 60950 Approved
- Meets IEC Safety Class II
- Right Angle Pins Available
- Single Regulated Output
- Meets EN 55022 Class A
- >300 kHour MTBF
- **Ultra-Miniature "SIP" Case**

- Notes:**
- Operation at no load will not damage the units, however, they may not meet all specifications.
 - The External capacitors (C₁ & C₃) shown in the typical connection diagrams on page 3 are required to meet specified operation.
 - All units will meet EN 55022 (CE/RE) class A with the input circuit shown in the "Typical Connection 1" diagram on page 3. The **MPL05SE** will meet class B with the additional filtering shown in the "Typical Connection 2" diagram on page 3. **MPD** offers filter modules that will save on board space and make the input filter design easier. Contact the factory for more information.
 - To meet the requirements of EN 61000-4-3, (10V/m) external filtering (as shown in the "Typical Connection 2" diagram on page 3) is required. This filtering may be added discretely, or by using a filter module from **MPD**. Contact the factory for more information.
 - All units will meet EN 61000-4-4 (±2 kV) with the input circuit shown in the "Typical Connection 1" diagram on page 3. To meet the requirements of EN 61000-4-4 (±4 kV), external components (as shown in the "Typical Connection 2" diagram on page 3) are required. This filtering may be added discretely, or by using a filter module from **MPD**. Contact the factory for more information.
 - All units will meet the requirements of EN 61000-4-5 (±1 kV/±2 kV), with the input circuit shown in the "Typical Connection 2" diagram on page 3. This filtering may be added discretely, or by using a filter module from **MPD**. Contact the factory for more information.
 - All units will meet the requirements of EN 61000-4-6 (3V rms), with the input circuit shown in the "Typical Connection 2" diagram on page 3. This filtering may be added discretely, or by using a filter module from **MPD**. Contact the factory for more information.
 - It is recommended that a fuse be used on the input of a power supply for protection. For the **MPL-03SE(F)** series, a 1.0A/250 VAC slow blow should be used.
 - The **MPL-05SE(F)** is available with the pins factory set to a 90° angle (see mechanical diagrams on page 4). To order units with this modification, add an "F" to the model number (i.e. **MPL-05S-12EF**).

Typical Connection 1

The diagram above illustrates a typical connection of the **MPL-05SE** series. With this connection, the unit will meet EN 55022 class A, EN 61000-4-2 ($\pm 4kV$), EN 61000-4-4 ($\pm 2kV$), EN 61000-4-8 and EN 61000-4-11. Components C₁ and C₃ are required to meet specified operation limits. The recommended input components are a 5D-9 (NTC), 0.1 μF /275 VAC (C_x) and S14K350 (MOV1). The recommended output component values are given in the table below.

Typical Connection 2: With External EMC Components

For applications that require meeting higher EMC standards, the circuit shown above is recommended. Some notes on this diagram (starting with the input circuit) are:

1. It is recommended that an external fuse be used. The recommended fuse is 1A/250V.
2. The capacitors C_x and C_{yx} are "safety" capacitors.
3. Capacitor C₁ is a filter component. This capacitor is required to meet specified operation. It should be a high frequency, low ESR electrolytic capacitor. The recommended value is given in the table below.
4. Capacitors C₂ and C₃ are output filter components. They are required to meet specified operation. Low ESR, high frequency electrolytic capacitors should be used. The recommended values are given in the table below.
5. Recommended values for components are:

6. The output TVS will help protect system circuitry if power supply fails. A recommended value is given in the table below.
7. Capacitor C₄ is ceramic. This capacitor is used to filter high frequency noise. A recommended value is given in the table below.
8. All of the components within the dotted lines of the input EMC circuit are included in a filter module available from MPD. Please contact the factory for more information.

Typical Board Layout: With External EMC Components

The diagram above shows a typical board layout for the **MPL-05SE** with the recommended EMI components shown in the "Typical Connection 2" diagram. Filter modules are available from MPD. Contact the factory for more information. To meet safety regulations, the board trace widths should be ≥ 3 mm, the distance between traces should be ≥ 6 mm, and the distance between traces and ground should be ≥ 6 mm. The distance "A" noted on the drawing should be ≥ 6.4 mm.

MicroPower Direct offers a wide range of AC/DC power supplies in miniature SIP packages. Current models include:

MPL-03SE

Key Features:

- 3W Output Power
- Universal 85-264 VAC Input
- EN 60950 Approved
- Meets IEC Safety Class II
- Right Angle Pins Available
- Meets EN 55022 Class A
- >300 kHour MTBF
- **Ultra-Miniature "SIP" Case**

MPL-03SEUP

Key Features:

- 3W Output Power
- Universal 85-264 VAC Input
- EN 60950 Pending
- Meets IEC Safety Class II
- Standby Power Consumption <0.5W
- >200 kHour MTBF
- Also Available at 1W and 5W
- **Open, Ultra-Miniature "SIP" Package**

MPL-01SE

Key Features:

- 1W Output Power
- Universal 85-264 VAC Input
- EN 60950 Approved
- Meets IEC Safety Class II
- Right Angle Pins Available
- Meets EN 55022 Class A
- >300 kHour MTBF
- **Ultra-Miniature "SIP" Case**
