- (1) Still air rating -10 to +50°C. Derate 30% at 60°C. Consult factory for increased ratings with moving air.
 (2) Minimum, consult factory.
 (3) Typical.
 (4) Acceptable added output capacitance, max.
 (5) Overvoltage protection for the 10 and 15W models comprises a zener diode across the output to limit voltage. Overvoltage in the 30W models is provided by a shut-down circuit.

The Kepco/TDK JBW series are comprised of three groups of affordable power supplies: 10W, 15W and 30W in a PC-card style. They offer fixed output voltages from 3.3V d-c to 24V d-c for space and cost sensitive OEMs. They operate from any a-c mains in the range 85-265V a-c or a d-c input in the range 110-370V d-c.

JBW are fitted with input filters that suppress conducted emissions below the requirements of FCC Class B, VCCI B, EN55011-B and EN55022-B. A flyback converter is used for high efficiency approaching 80 percent. The low profile and small footprint of the JBW power supplies will allow them to fit into tight quarters.

JBW are recognized to UL 1950-3, CSA22.2 No. 950-95 and EN60950. They bear the CE mark for use in the European Community. JBW are ideal for cost sensitive OEM applications that require a quality small power supply with all international and safety certifications.

CE JBW are CE marked per the Low Voltage Directive (LVD), EN60950.

JBW can be combined into a custom power assembly for multi-output requirements. Please see pages 131-135 for details on Kepco's Power Assembly Program.
